

IP Surveillance and Monitoring Solutions

Matrix IP are professional installers of high quality IP Surveillance and monitoring equipment, allowing the transmission of high definition CCTV images over your existing network, at any location, from anywhere.

In light of cost savings and more efficient installation methods, we are seeing a huge technological shift towards surveillance over IP. A growing number of institutions are making the technological shift towards IP surveillance.

IP (Internet Protocol) is an open platform that will allow integration with other equipment such as your existing computer network, gates, heating, lighting, door alarms or access control.

Benefits of IP

Remote Accessibility

Any video or CCTV images, live or recorded, can be made available to any location through a wired or wireless network (indeed any machine with an Internet connection), allowing management to view the feed from any camera, at any time.

Intelligent Cameras

Incorporating advanced functionality such as:

- Sound and motion activation
- Pan and zoom capabilities
- Intuitive user alert
- Event handling
- Substantially greater visibility and access control.

Flexibility

IP Surveillance can be adapted and scaled to any environment, There is no limit on the number of cameras that can be installed over a network and can therefore be tailored to reflect the level of security required.

Wireless Connectivity

Allows coverage of large scale sites, with a single recording point for multiple wireless cameras and areas making it a cost effective solution.

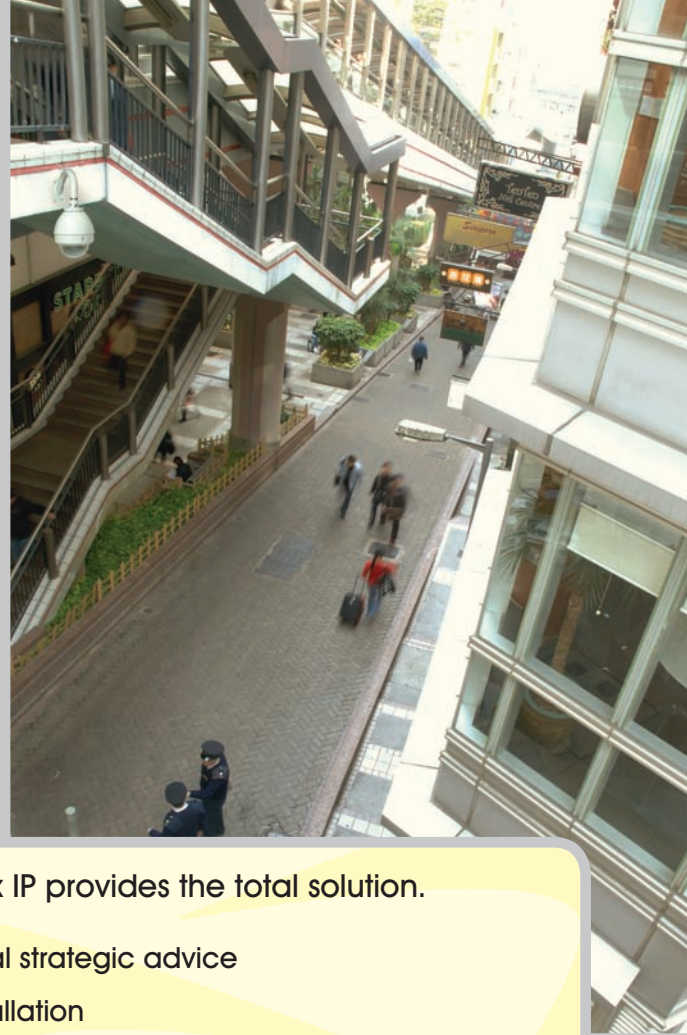

Reduced operating and maintenance costs

Without the need for dedicated cabling, installation costs can be substantially reduced. CCTV can be applied to many other applications such as health & safety management, process control, integration with databases and employee training can reduce costs and enhance revenue.

Power over Ethernet (PoE)

Another option is to incorporate Power over Ethernet (or PoE), a technology that allows the end user to power network attached devices directly over the camera's Ethernet connection rather than via a standard mains supply.

As well as providing obvious cost benefits, PoE gives extra flexibility in terms of moving cameras to follow trouble hotspots!

All our systems are installed to comply with all regulatory and data protection regulations to offer complete peace of mind.

An ongoing commitment to

Research and Development ensures latest technology is constantly being evaluated and implemented where possible.

Talk to Matrix IP about

- IP surveillance and high definition imaging
- Biometrics
- Integration of existing CCTV with IP technology
 - HVAC, Phone, Lighting
- Remote monitoring
- Networked access control systems
- Intruder alarm systems
- Perimeter protection and monitoring
- Automated gate and barrier systems and Number plate recognition systems

Matrix IP provides the total solution.

- Initial strategic advice
- Installation
- Training
- Maintenance
- Network advice
- Upgrades
- Finance options
- Data Centres & Structural Cabling
- IP Phone Integration - unified communications
- Automatic Number Plate Recognition (ANPR)
- Asset Tracking

Contact us for an initial chat about your security, monitoring and safety needs.
